Information Strategie & Alignment

Top issues financial services

Basel II/III Challenges

Strategic

- ▶ Become Basel II/III compliant at advanced level under enormous pressure from government
- ▶ Improve risk management rigor in a fluctuating market
- ▶ Become compliant for fund raising capability in foreign capital market
- ▶ Reduce minimal capital requirement and free up more earning asset

Tactical

- ▶ Hard to map and translate Basel II/III required data to source system data
- ▶ Insufficient, missing, inconsistent, and inaccurate historical data
- ▶ Tedious data collection from different line of business for operating risk reporting
- ▶ Decentralized and non-standardized source systems and data
- ▶ Substantial amount of report generation and validation effort
- ▶ Prohibitive IT infrastructure costs to support Basel II reporting

KYC Challenges

- ▶ Identify customers to make profiling possible
 - ▶ Data management: Importance of correct definitions
 - ▶ Data cleansing: Importance of having a customer once and only once in the database
 - ▶ Data Quality: Importance of having the right data of your customers
- ▶ Differentiate customers to different target groups
 - ▶ Data Profiling: Having the right attributes to hold the various properties of your clients
 - ▶ Data Extension: Have the right sources for filling the gaps in your customers
- ▶ Interact with customers to define products
 - ▶ Definition of USP's of products
 - ▶ Procedures for interacting with customers and follow up
- ▶ Customize products based on defined products and targets
 - ▶ Analysis tools to evaluate

Top issues financial services (cont'd)

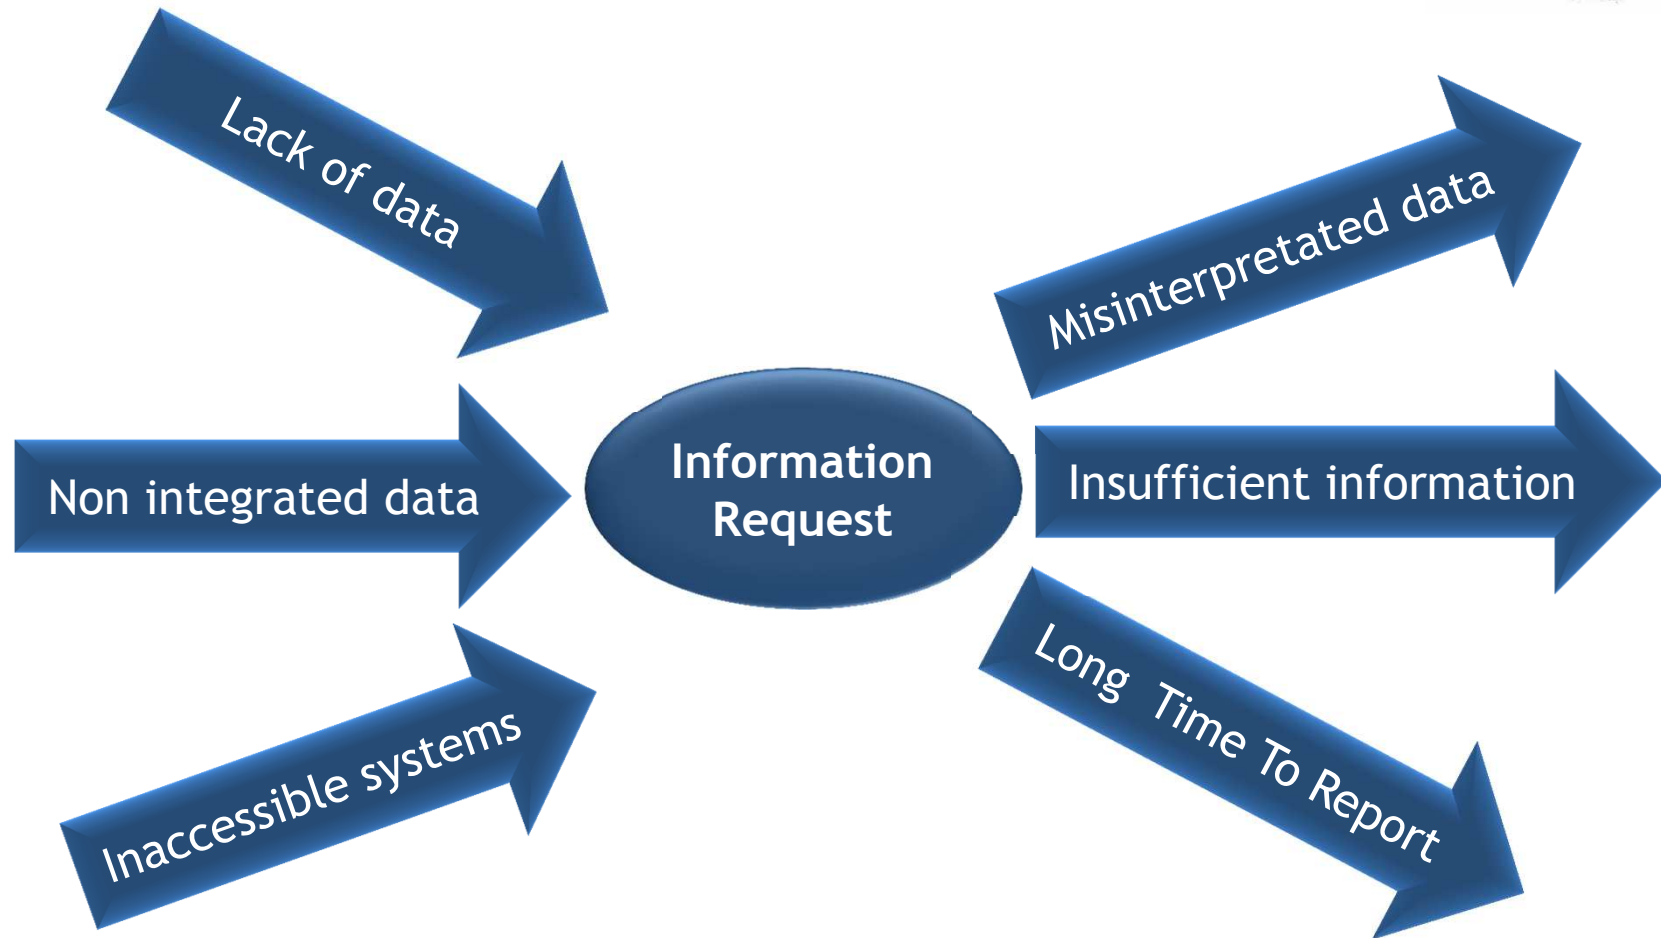

Solvency II Challenges

- ▶ No centralised management of business master data
- ▶ No centrally deployed strategic data quality tools or enablers
- ▶ No standard policies and procedures relating to data management
- ▶ Inconsistent data models, data structures and data definitions
- ▶ No common view of the material datasets required to support Solvency II
- ▶ No “single version of the truth” or “golden source” for key datasets
- ▶ Data not demonstrably complete, accurate or appropriate
- ▶ Data not available in timescales aligned with new reporting requirements
- ▶ Current data quality activities are tactical, manual & reliant on EUC tools
- ▶ Inconsistent approach to data cleansing across the business
- ▶ No coherent or centrally managed approach to data remediation
- ▶ Focus on manual adjustments to data rather than resolution of root-cause issues in underlying processes and controls
- ▶ End-to-end data architecture, including key dataflows, systems and control points, is extremely complex & not currently documented or demonstrable
- ▶ Liabilities data is subject to iterations of poorly controlled manual processing and amendment, and may touch multiple systems and EUCs, restricting traceability of data used in model
- ▶ Asset data poses significant sourcing challenges due to reliance on third party asset managers

Reporting Challenges

- ▶ Maximize data quality in order to minimize risk management issues
- ▶ Implement a definition glossary (‘master data management’) to exclude the risk of inaccurate reporting and create a Single Point of Truth
- ▶ Define an external reporting mechanism, and thus staying DNB ahead in communicating to the markets
- ▶ Reducing costs by centralizing regulatory reporting
- ▶ Choose and implement a strategic data quality tool to monitor and correct upon data quality issues
- ▶ Create a digital archive (together with business rules) for recording business data and source documents.
- ▶ Facilitate the creation and monitoring in audit trails
- ▶ Minimize systems for the various types of data, so minimizing defaults and creating golden sources for key datasets
- ▶ Focus on manual adjustments to data rather than resolution of root-cause issues in underlying processes and controls

Issues regarding Information Requests

Issues regarding Information Strategy

- How can we make business goals measurable?
- Which KPI's are right for our business?
- How can we divide them for our business functions?
- How do we measure and evaluate?
- Are we capable of disclosing our data uniformly?

Information Strategy - What is it

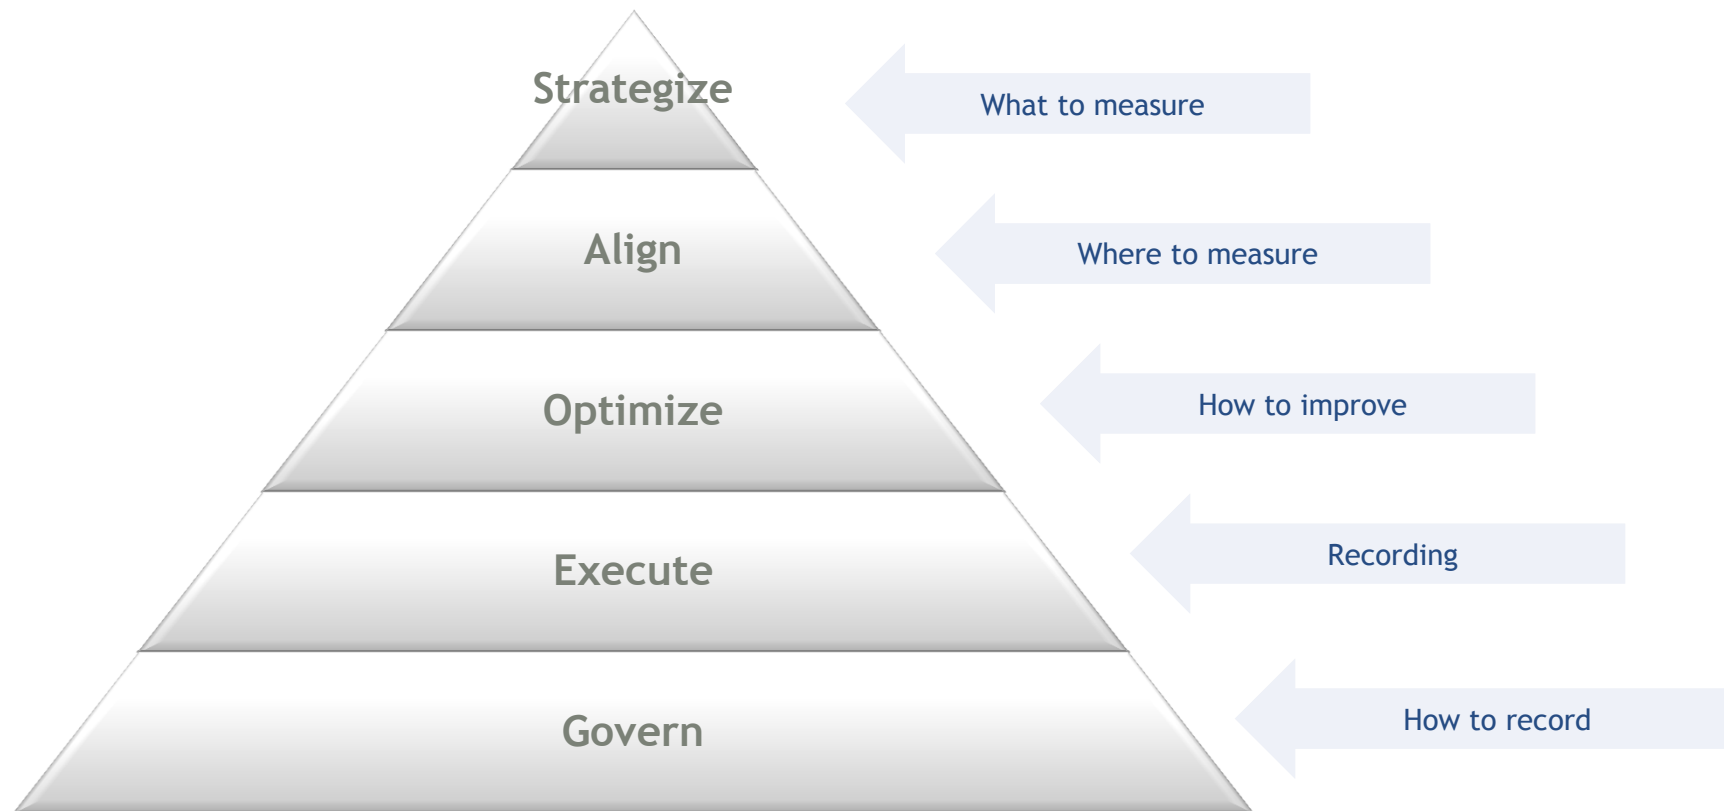

Information Strategy

An *information strategy* defines how a company will use the data it collects to achieve a competitive advantage.

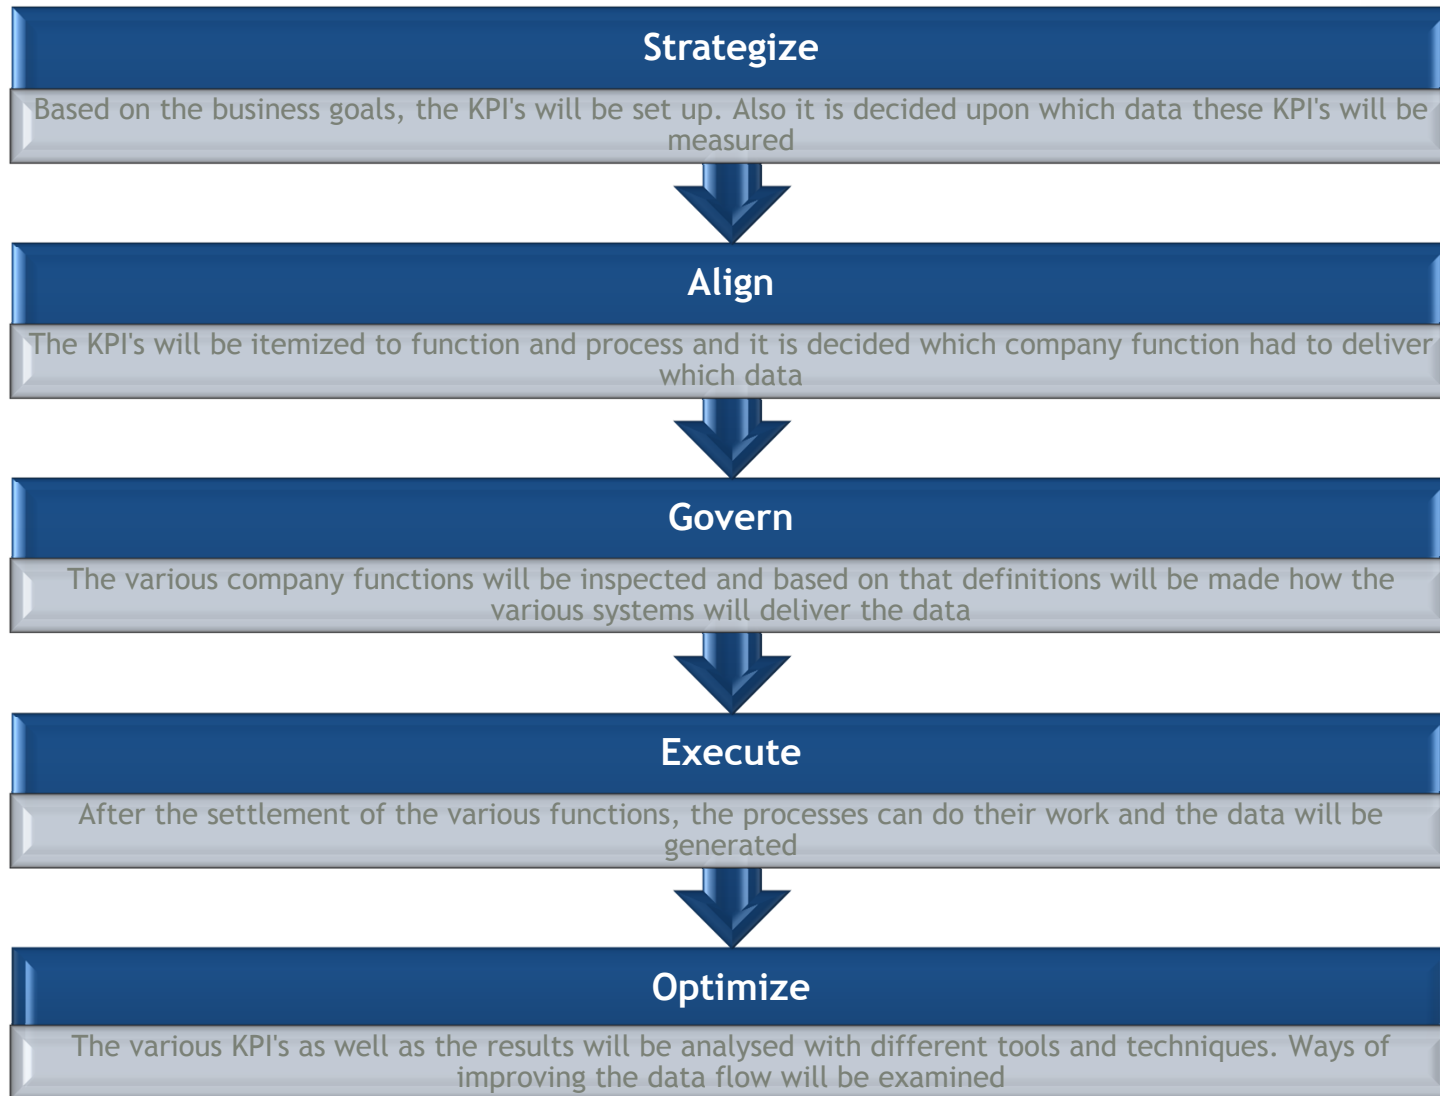

It is a comprehensive, constantly evolving plan that encompasses five distinct actions: strategize, align, govern, execute, and optimize. When working in harmony, these actions improve processes, increase productivity, and enhance decision-making. Information strategy permeates every level of the business, from the CEO's office down to frontline workers and out to customers and partners.

By introducing or refining an Information Strategy you will gain more insight in your processes, you are aware of your results quickly and you will reduce your data collection time. As a result you will work more cost effectively, your time to act will increase and you will be a step ahead of your competitors. And you will be able to comply faster with regulatory reporting (such as to stock holders and government).

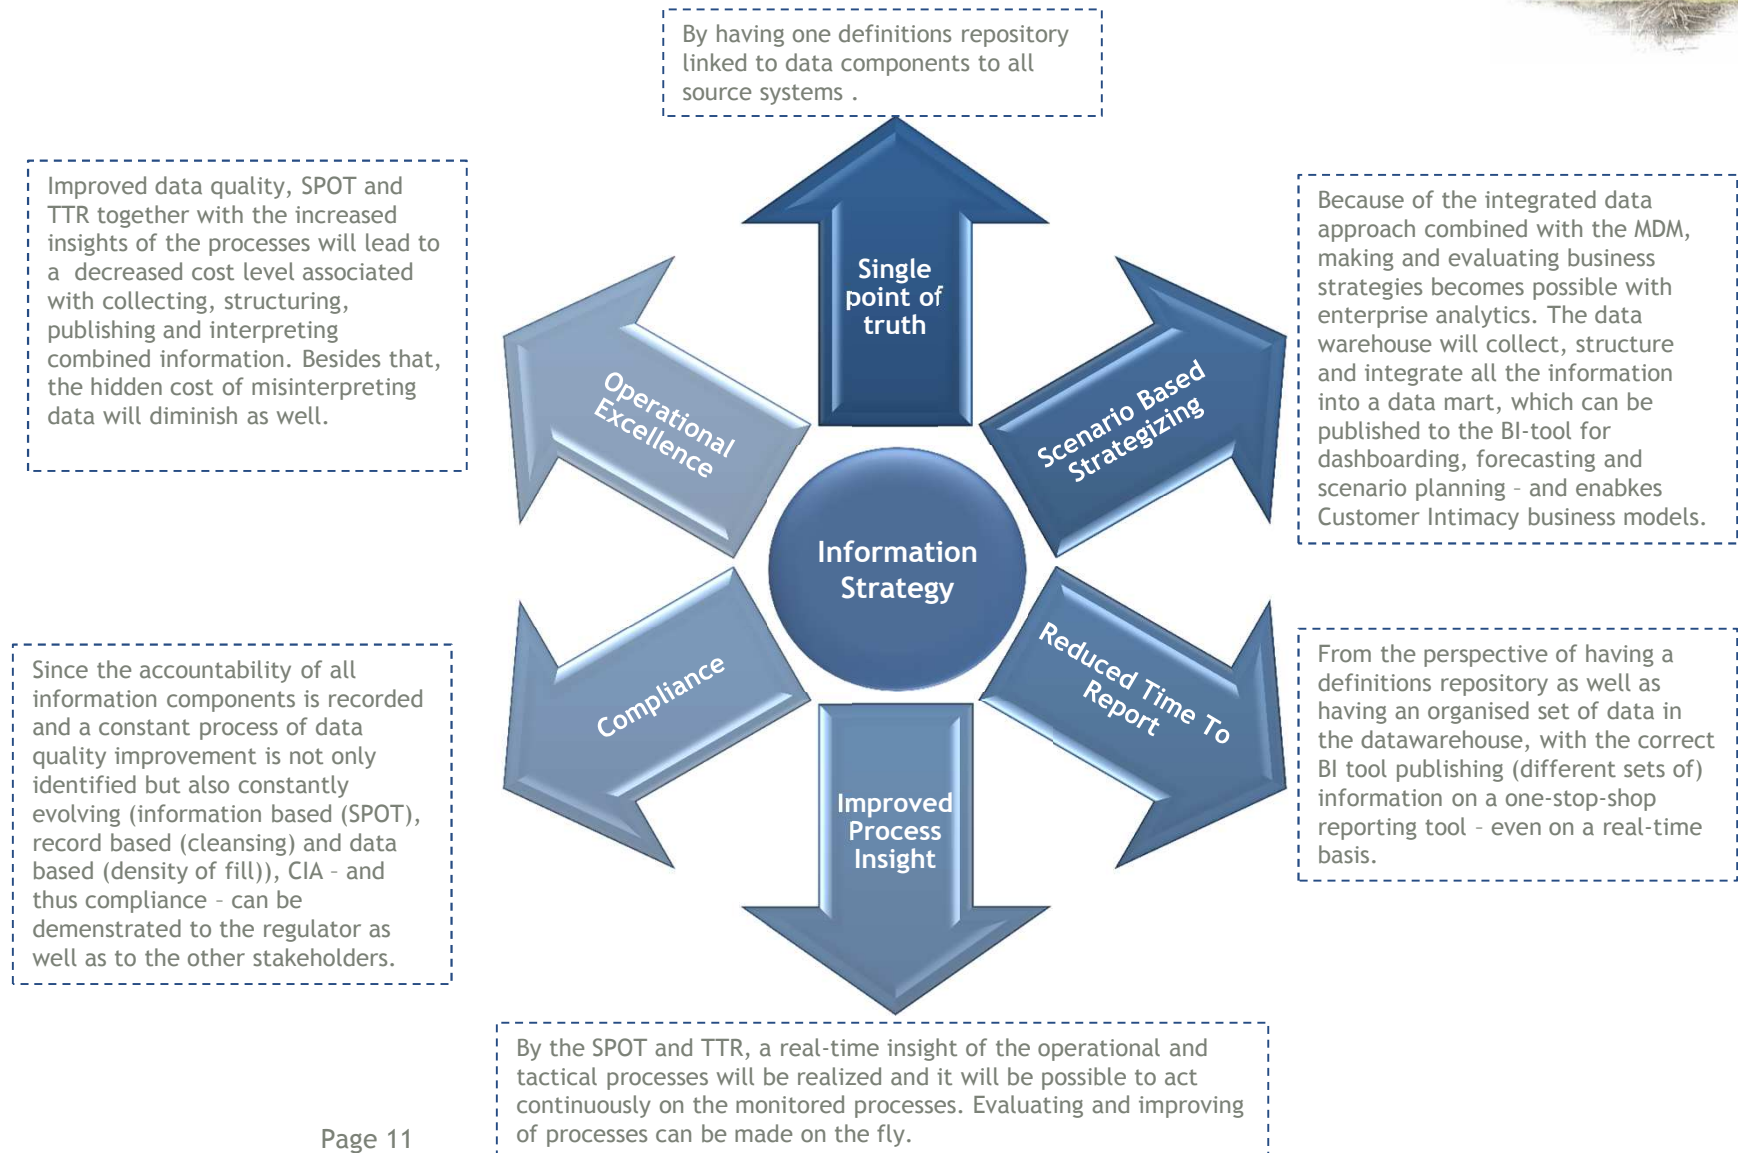

Information Strategy - Approach

Information Strategy - Approach (cont'd)

Added value of Information Strategy

Plateau 1: Data Governance

Data Governance

Data Governance covers the set of rules, definitions and frameworks concerning collection, maintenance, checking and correcting the data present within an organisation as well as the management of these processes

What is covered by Data Governance

Master Data Management: Define and document all information components within the target area

Data Integration: The minimization of the source systems in which (indirect definitions of) data is held

Data Quality: The effort to collect, structure and maintain the necessary data in the various systems, in such a way that the Information density is maximized.

Data Profiling: The analysis of the instances of the various data components on such a level that an unbiased level of data quality can be shown, and that can be identified which steps can be made to cleanse the data

Data Architecture: The system landscape which facilitates the data flow in the organisation

Information extricated

Confidentiality

- Defines the privacy and secrecy of the data. Different types of information have different levels of confidentiality. These levels can further be split up to the various users and/or user groups as well as to the system environments.

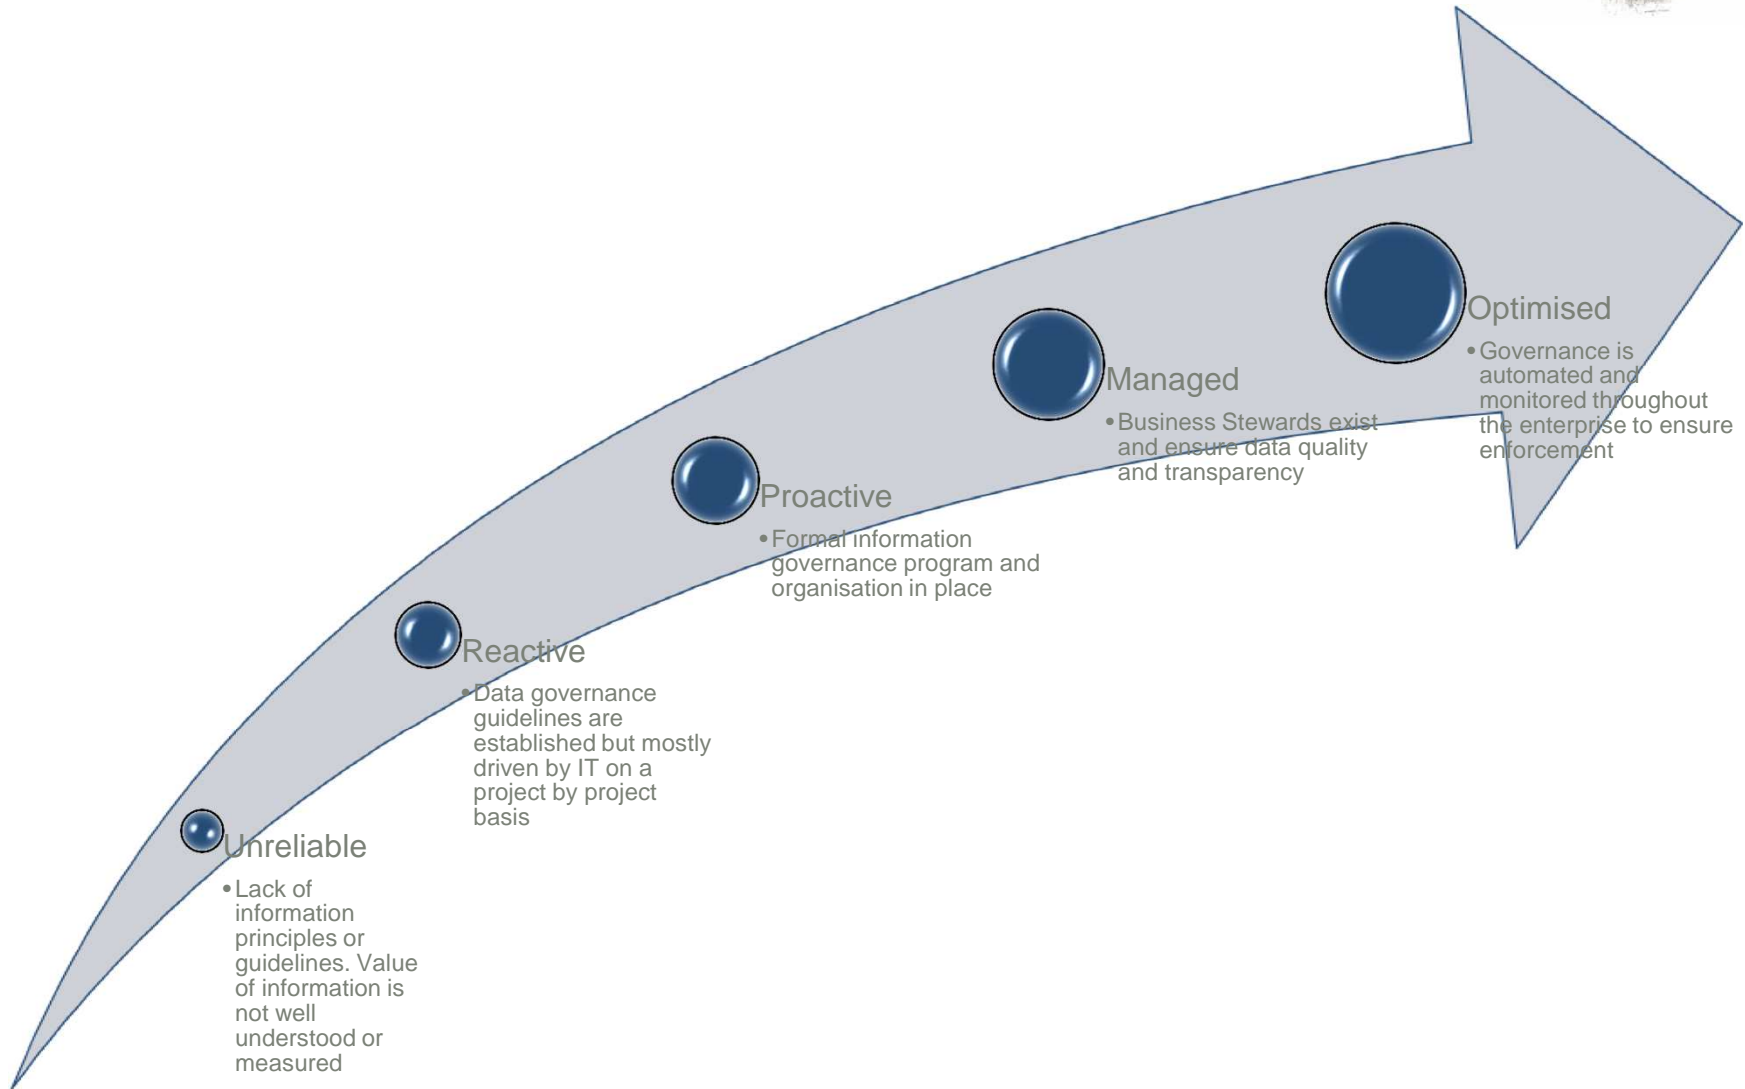

Integrity

- Can be split up into two components:
 - Reliability: Defines the confidence level of the information component to be true
 - Completeness: Defines to which extent the information given gives a full picture of the reality

Actuality

- Defines the timeliness of the information component. Accuracy of the data - thus reflecting the value at present in the 'real world' plays a part of it, as well as the punctuality of the data loaded.

Data Governance Maturity Model

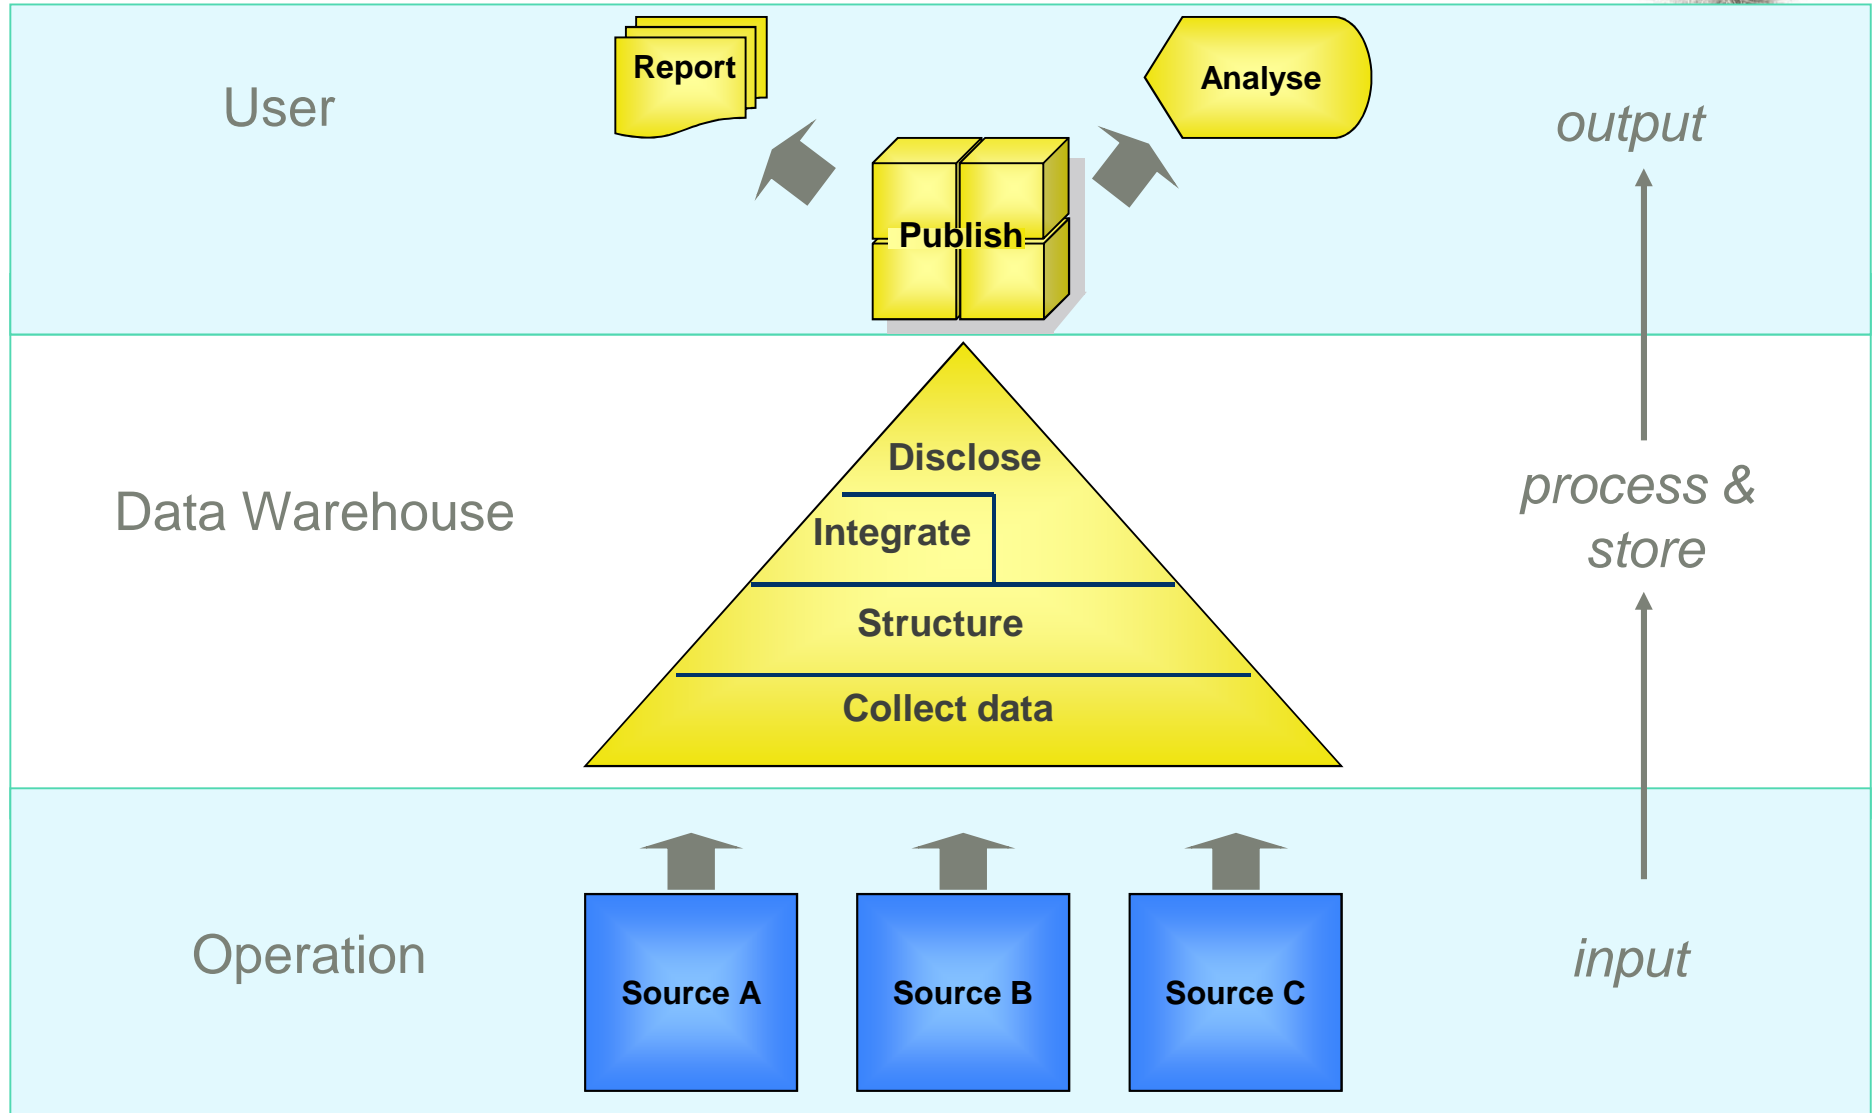

The Data Governance Spider

Examples tooling

- SAS Data Integration
- InfoSphere
- Oracle MDM Suite
- iWay DQC Portal
- Talend
- Data Cleaner
- Collaborative Info Manager

Plateau 2-4: Reporting & Analysis Environment

Plateau 2: Datawarehousing

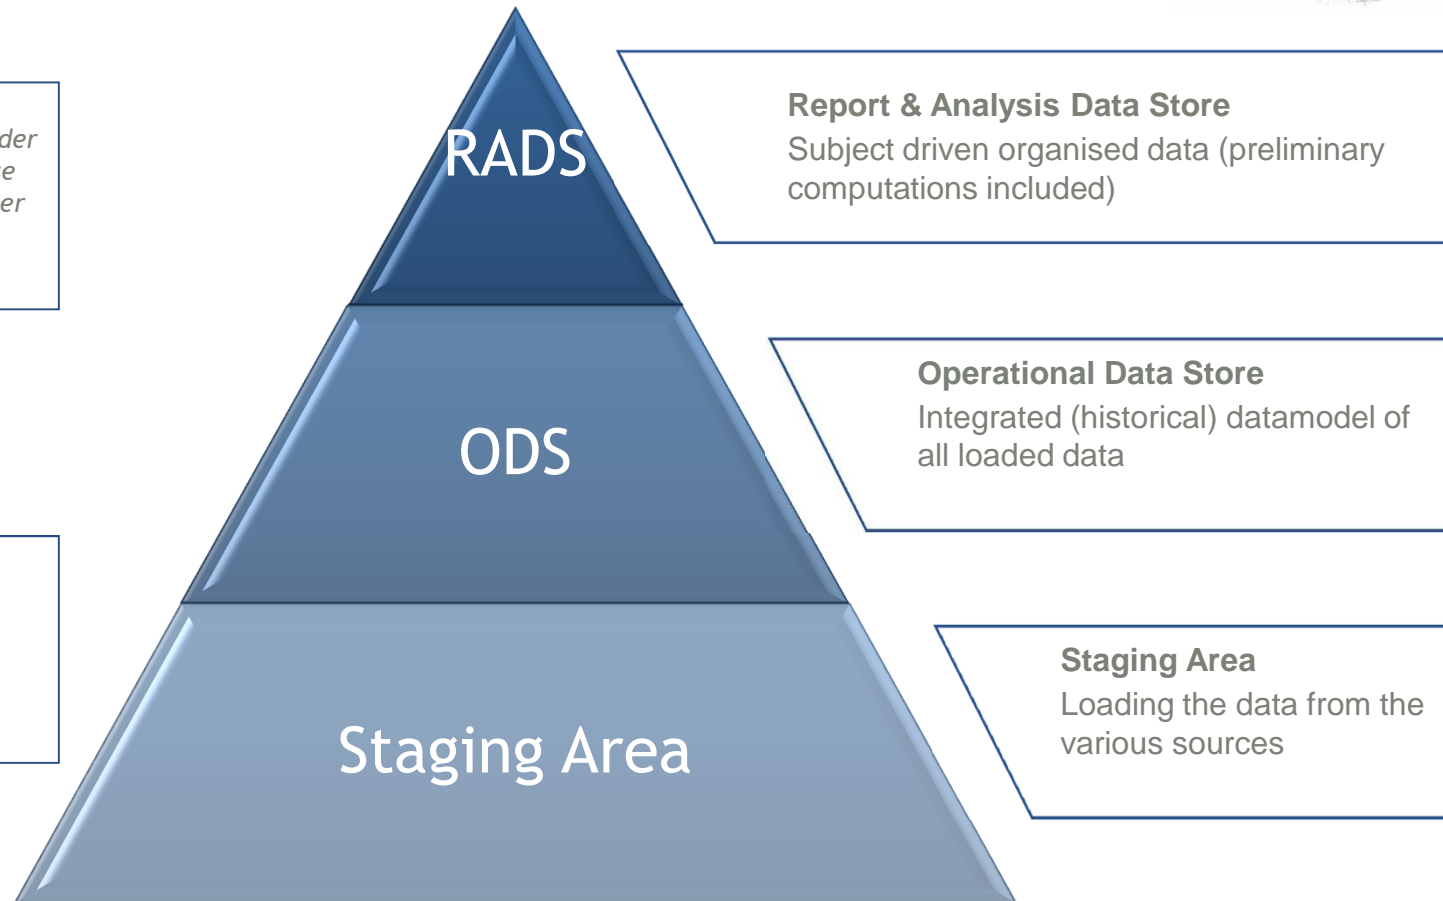

Examples tooling

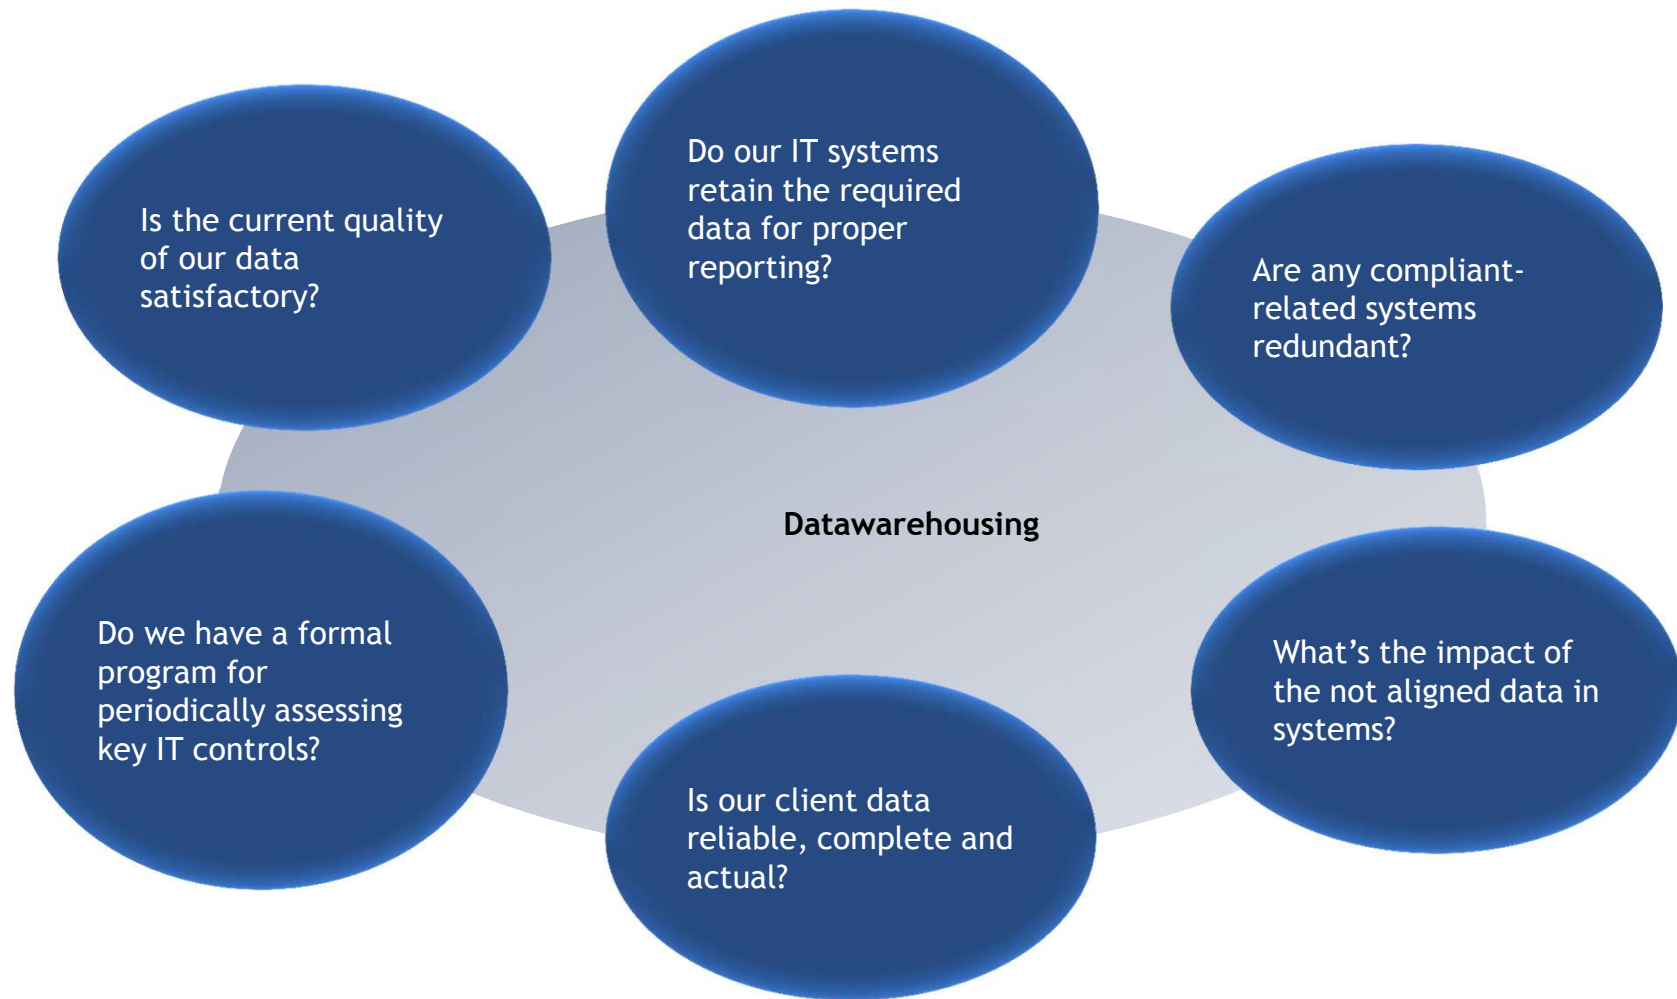

- Oracle Warehouse Builder
- SAP Business Warehouse
- Informatica Powercenter
- Pentaho ETL

Possible architectures

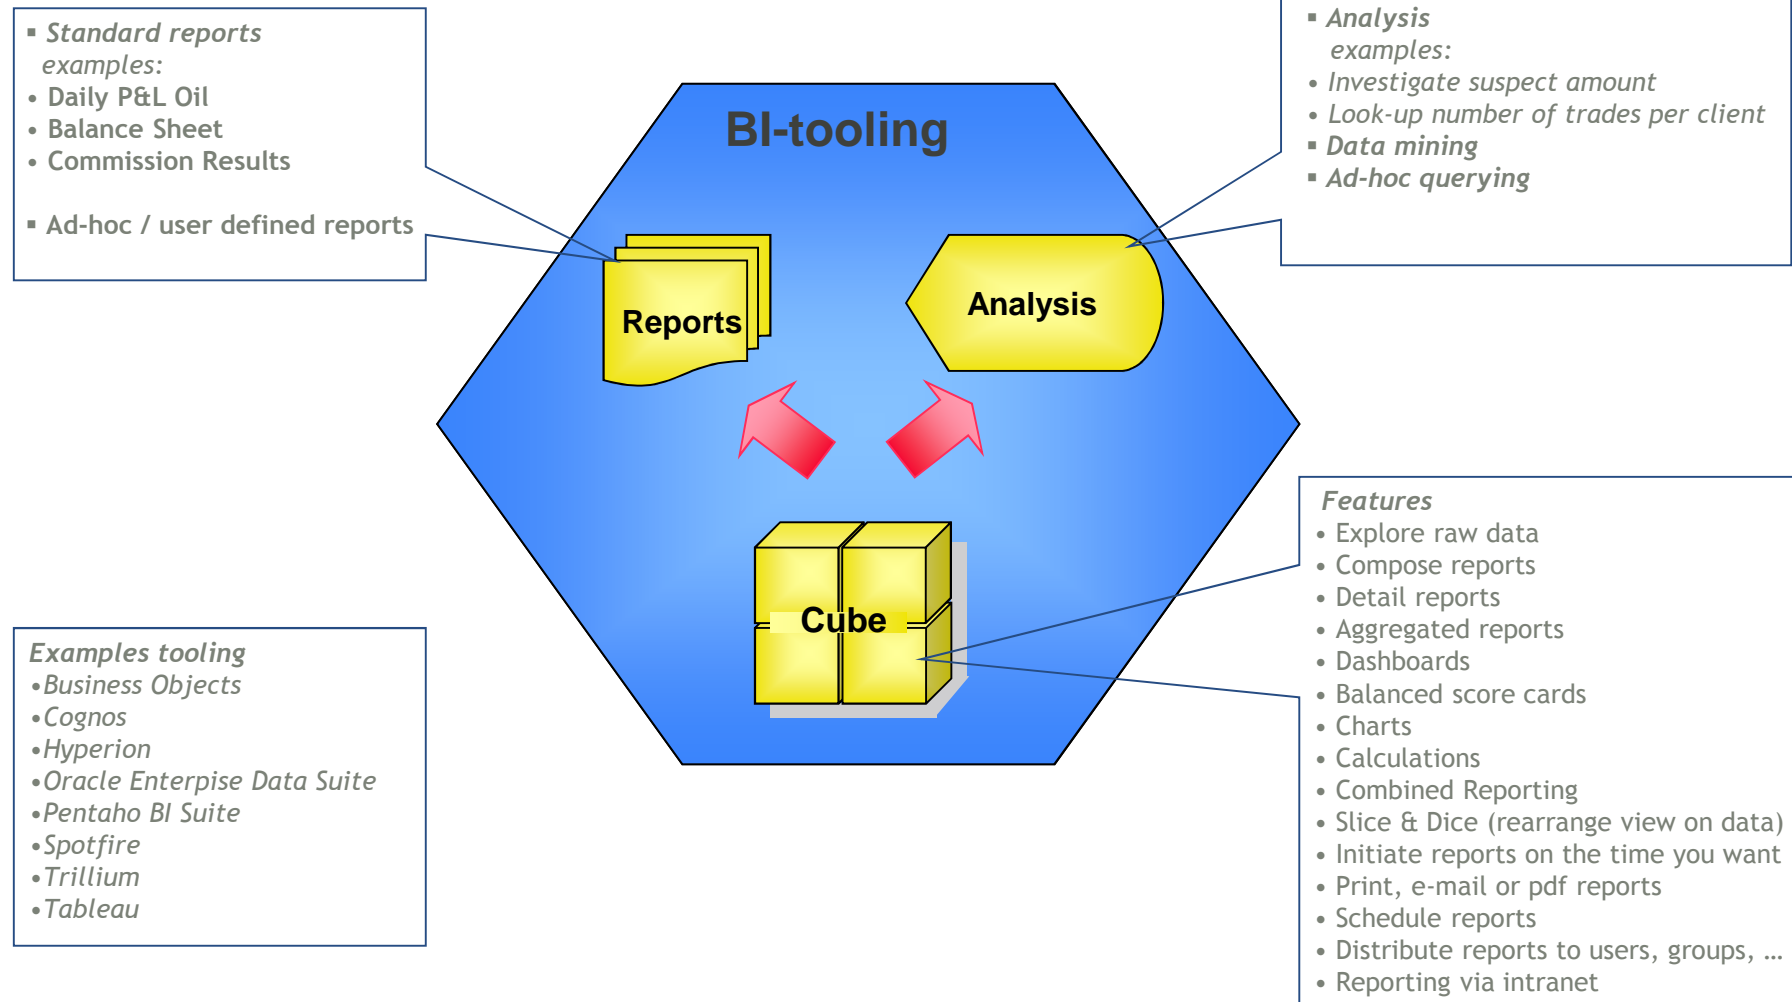

- Kimball
- Inmon
- DataVault
- Hybrid

Issues regarding data

Plateau 3-4: Business Intelligence

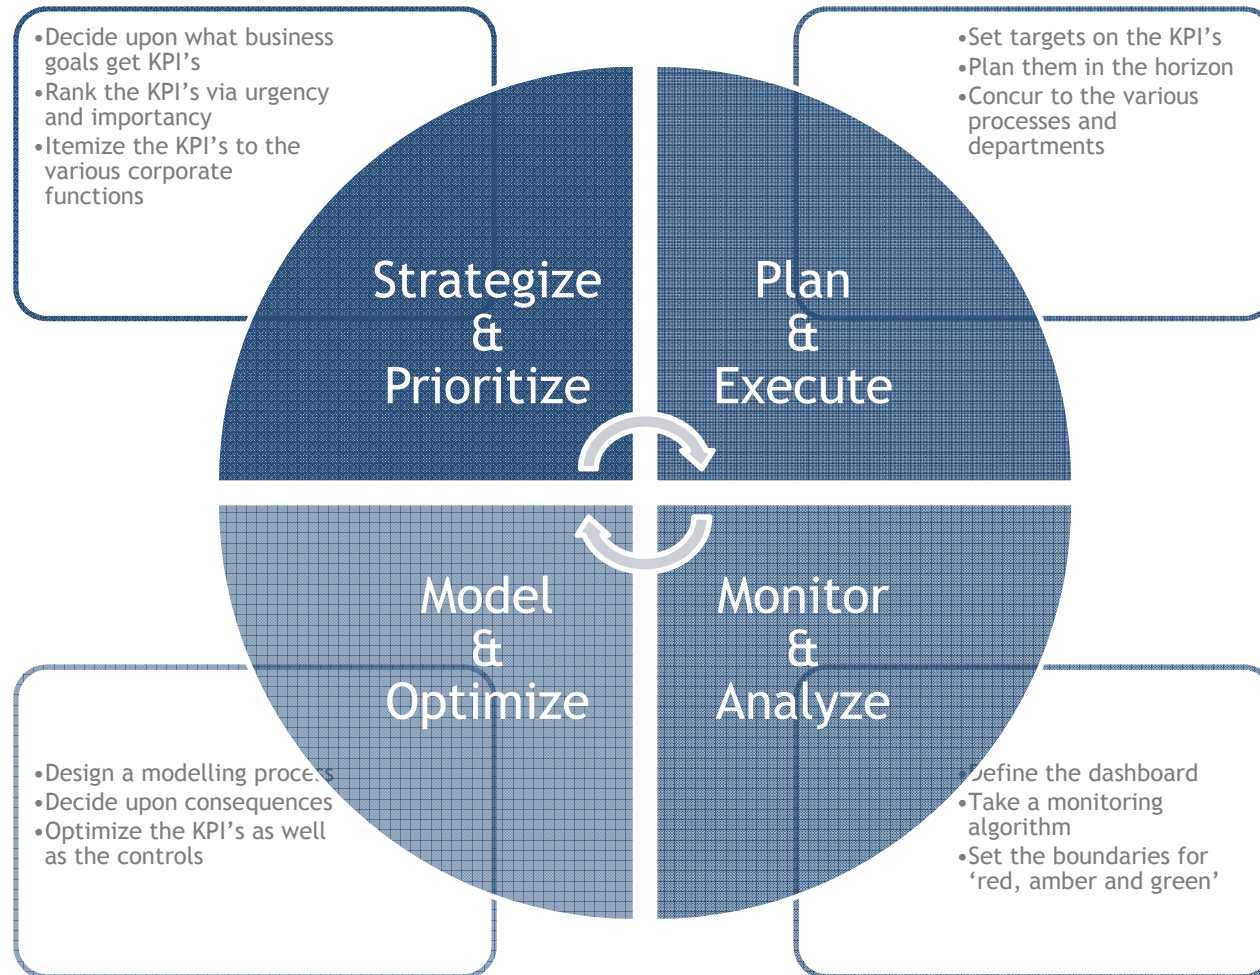

Plateau 5: Enterprise Performance Management

Examples tooling

- Cognos
- Hyperion
- SAP Outlook Soft
- Business Objects
- Pentaho BI Suite
- Information Builders

Why Caronne

Network of specialists

Caronne has very experienced employees - and a large network of specialists specialised in all aspects of enterprise information and analytics.

System Independent

Caronne has no liaisons with any system integrator or solutions provider. Our focus is 'customer only'.

No nonsense, flexible approach

Methods and methodologies are made for making the work easy. Although we are trained in the newest methodologies such as Scrum, Agile and Lean but also in the more established methods such as RUP and Prince II, we look at the most effective way to produce the best result for you.

Clients in many branches

Information is the key in an organisation. That's our vision. And we implemented this on various ways in many sectors. Including Government, not-for-profit, financial services, publishing and the energy sector.

Our offerings

- ▶ **IBA Quick Scan™**

Photographing the current situation and advising next steps

- ▶ **Data Governance Spider**

Defining a Data Management roadmap

- ▶ **Trendnavigator**

Design and implementation reporting environment

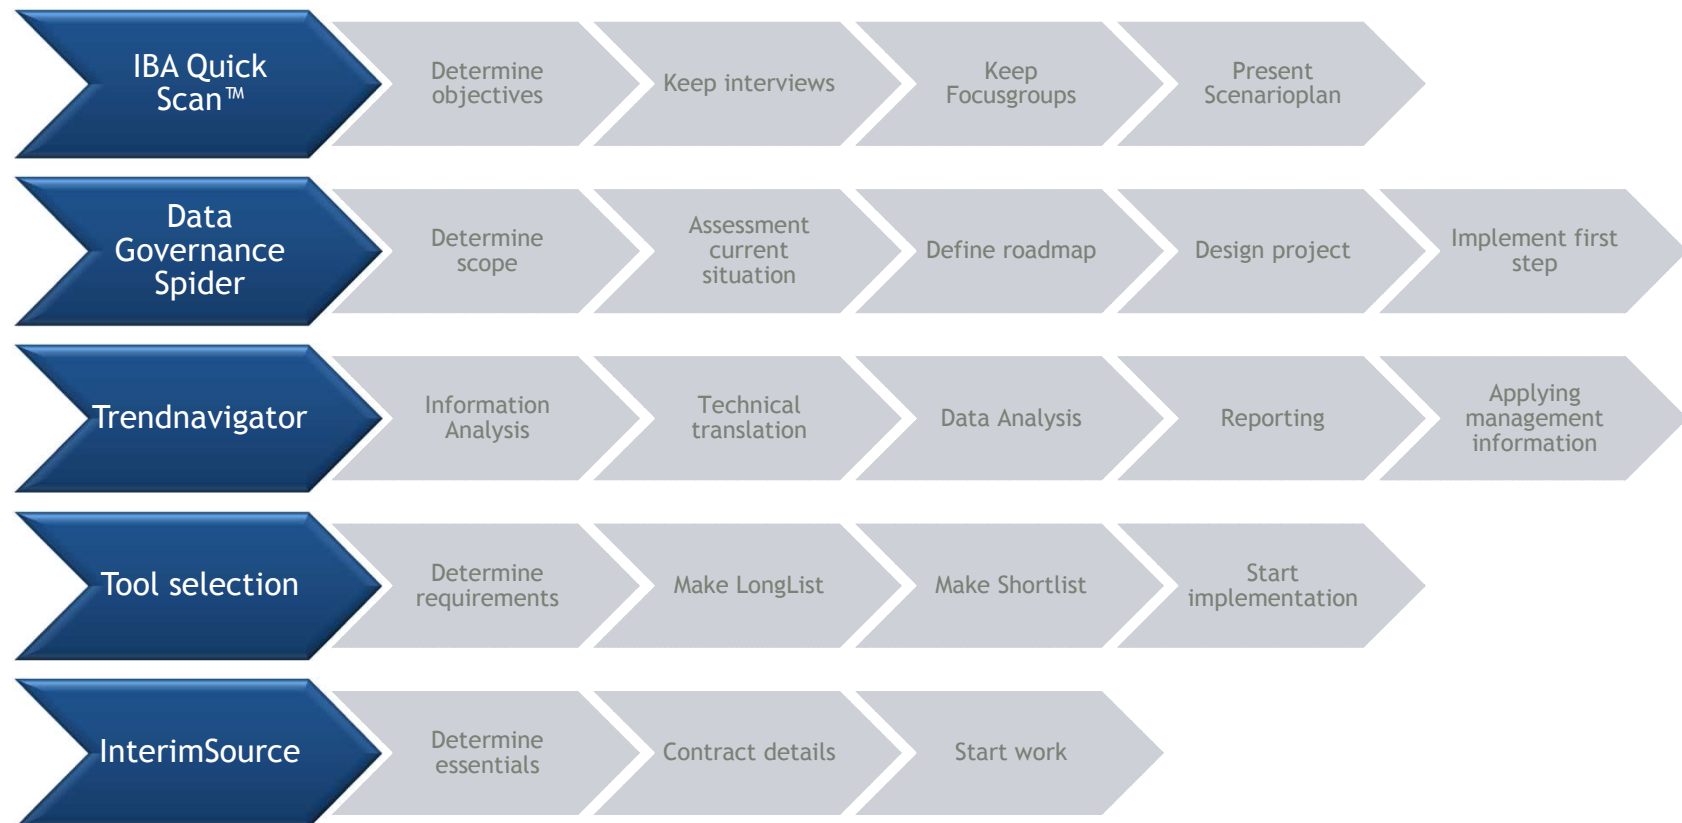

- ▶ **Tool selection**

Selection and implementation of info based systems

- ▶ **InterimSource**

Delivery of specialists for project management, tool selection, business analysis and development

Our Approach

Credentials

- Implemented data warehouse for Merchant banking regarding contract and client information. Creation of clean mtm computation.

ABN
AMRO

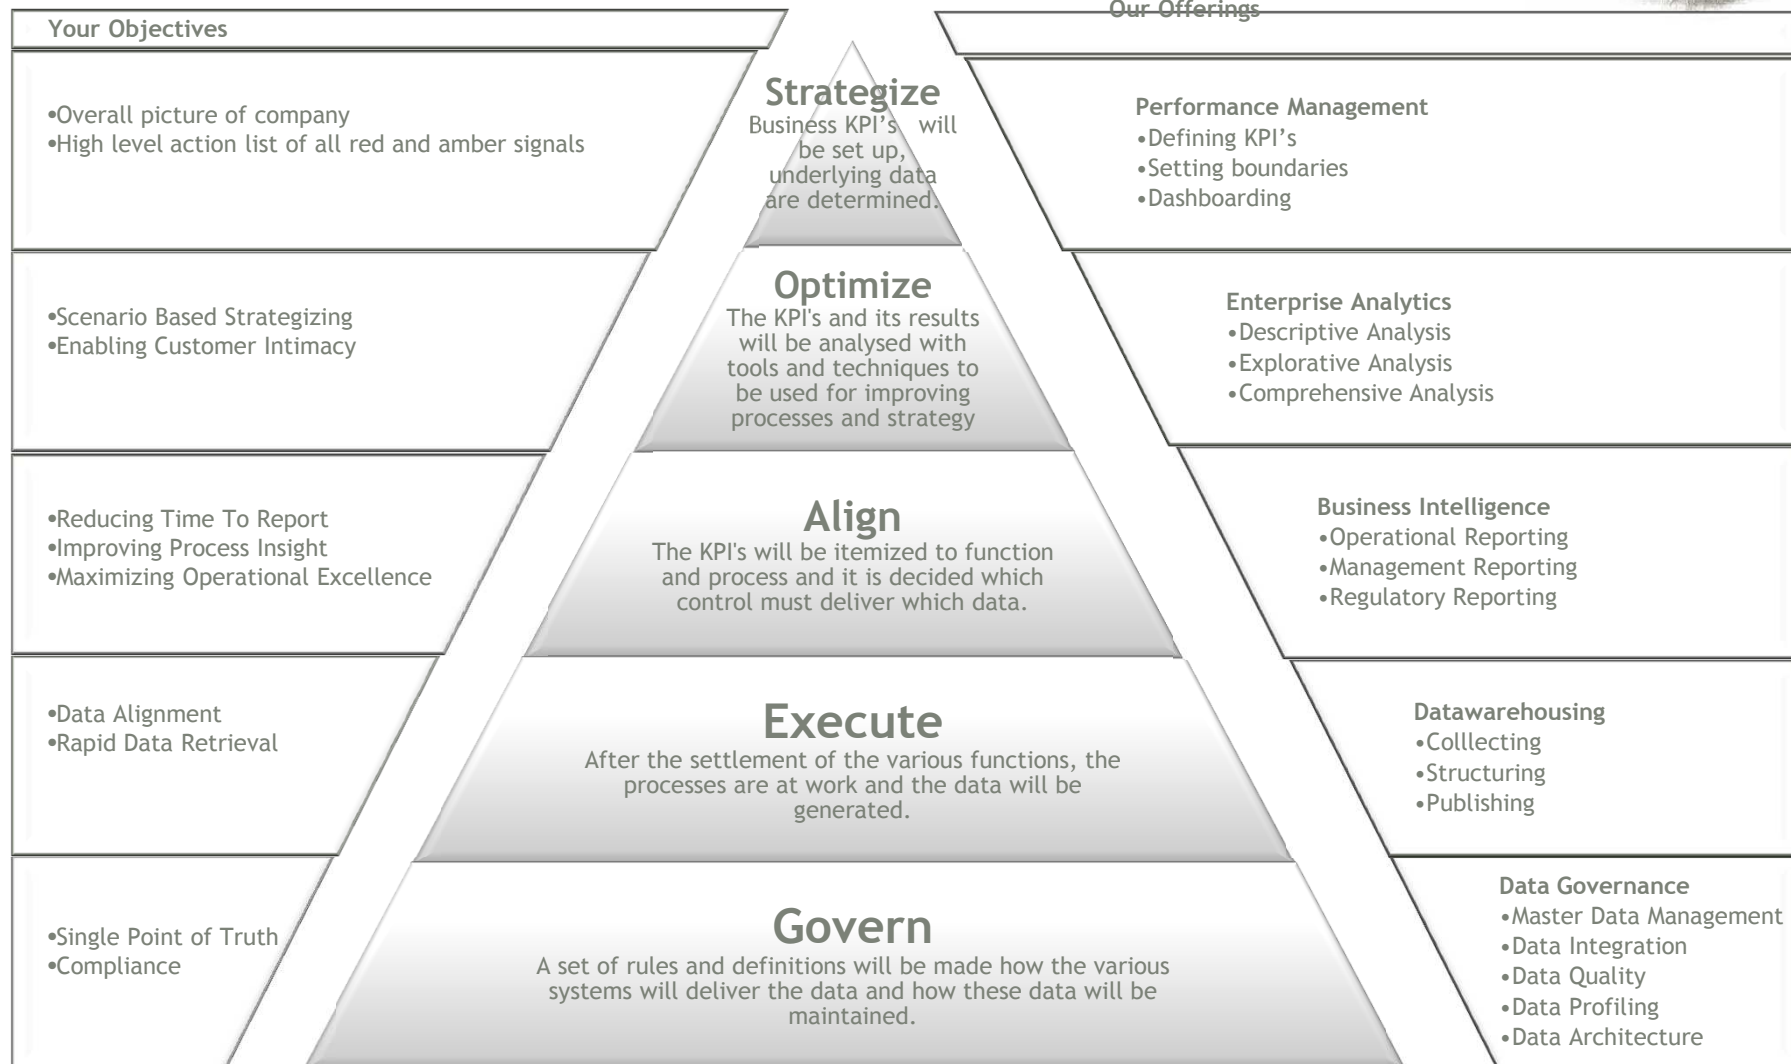

- Redesign of a large data warehouse for receiving regulatory reports from banks (CRD IV) and sending it to SSM

DNB

- Designing a webshop and fulfilment for it; creating reports and making profile analysis of the data

TMG

How we can help to accomplish your objectives

Background

I am a visionary, open minded advisor who determines direction and is solution driven. I want to inspire, to be inspired and to excel for the customer. I'm specialized in "Information", like Datawarehousing, Data Governance, Business Intelligence, Big Data and CRM. I have more than 14 years of professional experience in a wide range of branches, with the accent on financial services, marketing and publishing.

Education

- Masters degree in Econometrics, specialization Business Informatics, in 1996
- Post-University degree in Digital Marketing & Strategy, 2009
- Degree in Big Data Analytics, 2012
- Certified ACI Dealer, 2013
- Certified Prince II Practitioner, 2002
- Publication "Combinatorial Optimization with feed back networks", 1996
- Publication "Intelligent Business Analysis", 2004

Languages

- Dutch (native)
- English (professional)
- German (proficient)
- French (proficient)

Skills

- Fin.services: Basel III, Solvency II, IFRS, FATCA, EMIR
- Marketing: CRM, data mining, game theory, ECM, EDM
- Government: AWBZ, Wmo, Gemeente heeft Antwoord
- Project Management(Prince II, DSDM, IPMA, Scrum)
- Interim Management (ASL, BiSL, WFM, ITIL)
- Management Consultancy (RUP/UML, PDCA, CMMI,

Caronne

- Big Data (incl. Architecture and Analysis)
- Business Intelligence (incl. Data Modeling & Analysis)
- Data Warehousing (incl. Architecture)
- Data Governance (incl. MDM and Profiling)
- In-depth experience in the field of business analytics and architecture
- Tool selection (a.o. BI, ETL, CRM) and Migration

Experience Project Management

- Project management of implementing Collateral Management Reporting with a datawarehouse as part of an overall ECB project
- Project management of implementing a reporting environment for client and contract information for the Trading room (Front Office) and the PCA department of an International Bank (worked at NL and B sites)
- Project management of DataHub for an international bank: An environment for Credit and Market Risk, which calculated mtm's for the departments ALM, Collateral, Risk and MA&R
- Project manager of a large publishing company, for reporting and data migration of a large website, including leading the outsourcing engagement. Also project management of Trip accounting and Reporting for Logistics and Controlling
- Project management of the data warehouse for Wmo, including a financial reporting environment for their 443 clients (i.e. municipalities) for a large semi-public undertaking
- Project management of design and implementation of an Internet plaza for a start up, including design and implementation of a web based linked backoffice
- Project management and development of an analysis and reporting environment for an international utility company, including enclosure of 40 backoffice systems
- Project management of a large scale data integration and cleansing project for an international publishing company.
- Project management of a knowledge management project for marketing and sales of a publishing company, in which process wide knowledge as well as document-tation (incl. campaign management) needed to be secured

Experience Interim Management

- Developing a vision and strategy concerning Business Intelligence and implementing this at a National Central Bank
- Setting up a Business Intelligence Competence Center which would maintain the data warehouse at an international trading bank
- Change manager (changes > 100k) for a large publishing company
- Managed data analysis project focused on fraud reporting, including accuracy, completeness and tracking and tracing illegitimate medical practitioners on an international insurance company.
- Initiating and extending a datawarehouse department at a large utility company
- Setting up and running a Market Intelligence department for a large publishing company, furthermore facilitating marketing and controlling with a reporting environment and recruiting marketeers for 1-1

Experience Management Consulting

- Executing a reporting (database, ETL and BI) tool selection regarding data archiving and warehousing for an international merchant bank
- Performing a Quick Scan Analysis of the Wmo process, advising business improvement and project management of integrating two IT departments at a Dutch municipality
- Developing a roadmap (program management) for the information services for a semi-public organization, taken into account the governmental stakeholders
- Executing an IBA Quick Scan™ and advising to achieve the next step in the marketing and sales process, including investigation possible CRM systems at a printing company
- Tool selection of a companywide CRM system for a large publishing company
